

2.2 Regional Operational Centers

2.3 Risk Preparedness

Mr Christophe Gence-Creux, ACER

32nd Florence Forum
17/18 May 2017, Florence, Italy

- The ongoing market integration process in the context of decarbonisation and digital transformation will require more and more coordination (both for the market-related AND system operation functions)
- Assigning RSCs additional coordination functions and decision making powers* is inevitable, but it appears challenging
 - The relevant question is not “*If*”, but rather “*When*” and, above all, “*How*”
- Adequate regulatory oversight of RSCs+/ROCs is essential in order to ensure compliance with their obligations

*TSOs may choose not to carry out a decision by ROC should safety of the system be negatively affected
