Gas Transmission Europe

# **GTE+' view on ERGEG's principles**

ERGEG Workshop, 18 February 2009

GTE Capacity Chairman: Ralph Bahke

## General GTE+ principles

- New mechanisms must be reasonable and easily to be implemented
- ! • National legislative and regulatory frameworks are crucial for implementation
- Principles must be coherent
- TSOs need clear incentives to implement any methods

**Users and TSOs need certainty**

## GTE+ questions on principles

- What is the role of users and TSOs in the consultation?
- How should the reservation of capacity for short-term capacity be contractually implemented?
- Bundled capacity offers vs. several possible allocation methods
- No distinction of domestic and transit
- Existing long-term contracts have benefits

**Practicability to be ensured**

## GTE+ questions on principles

- Long-term UIOLI: Can TSOs determine the releasable share and how much?
- Non-dominant players clause
- Common EU rules for capacity calculation?
- NRA responsibility versus EU-wide harmonisation

**Feasibility to be ensured**

## Summary

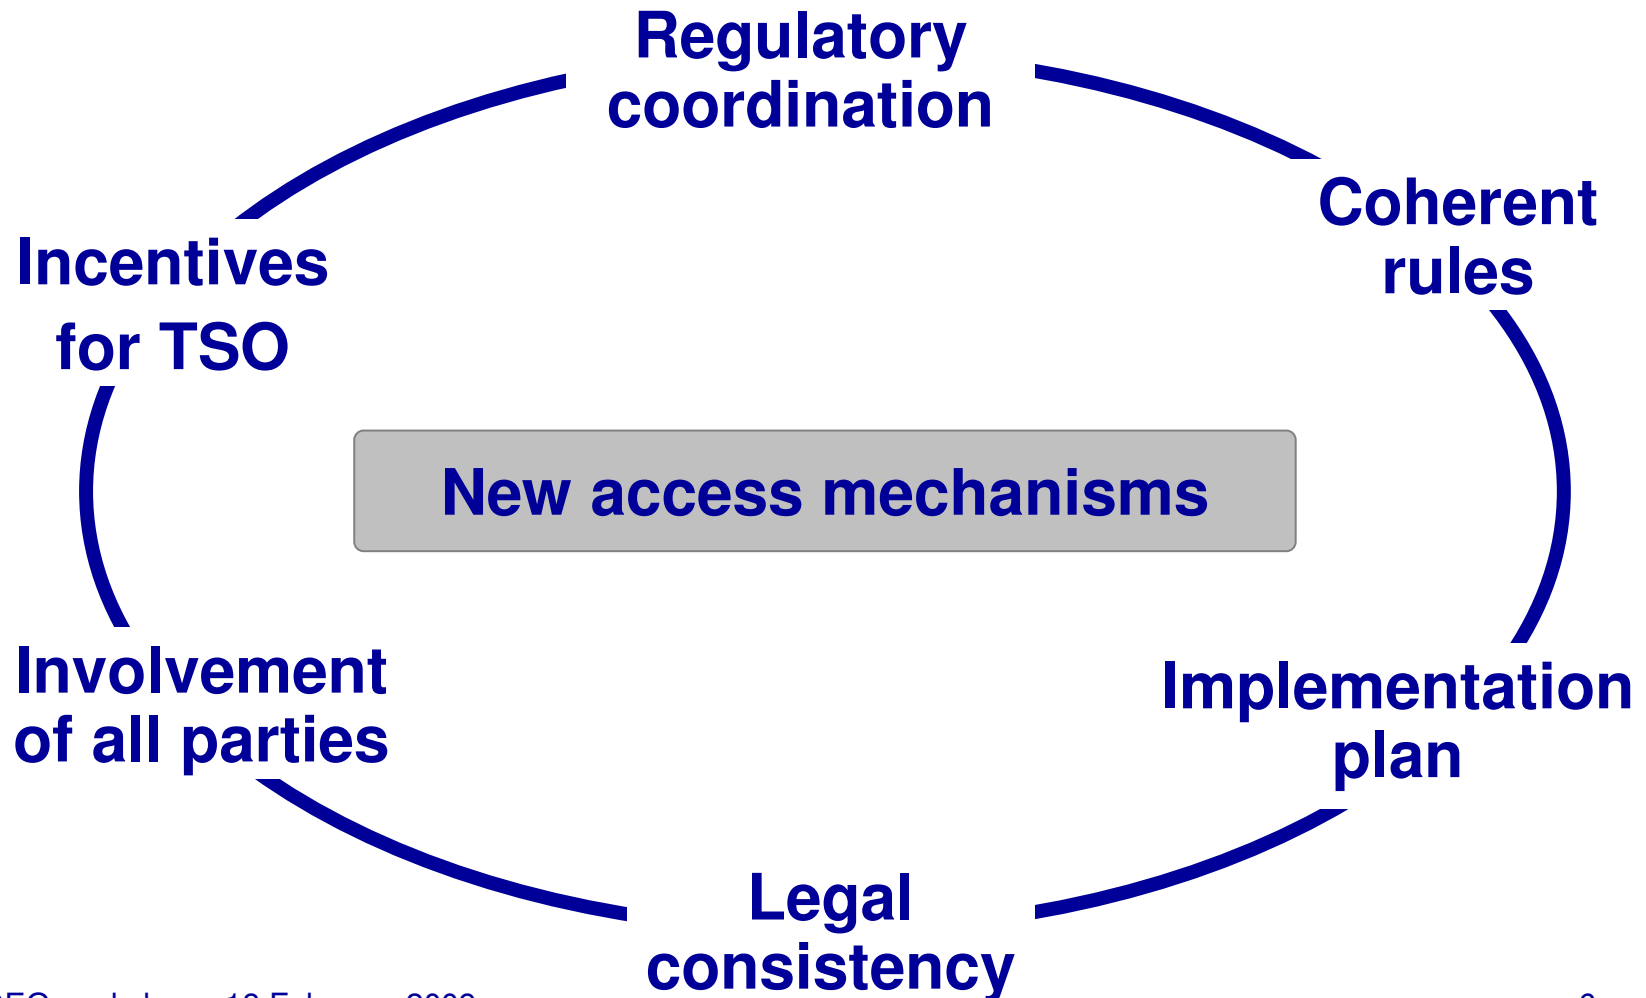

- Concrete rules require concrete preconditions

### Crucial for implementation are:

- **Legal and regulatory frameworks**
- **Costs to be rewarded – incentives must be guaranteed**
- **Credible, practicable and consistent**

# Implementation requirements

Gas Transmission Europe

**Thank you very much!**
